GARAGE FLOOR TRANSFORMATION IN ONE DAY

The Preserve at Spring Creek senior living community recently partnered with Stephens Commercial Painting to update the garage floors in our independent living cottages.

For many people weighing a move to senior living, the garage is part of what makes a cottage feel like home. It holds a car or golf cart, but it can also offer space for a workshop, a craft room, or storage for the things they are not ready to part with.

SUMMARY

- Better traction, even when wet
- Reflective surface makes the space brighter
- Dust-free and easy clean
- No maintenance or sealing required
- Extend livable space with a workshop, craft area, potting area, or garage gym

THE PRODUCT AND PROCESS

Stephens Commercial Painting installed a professional-grade garage floor coating system, start to finish in one day:

- **Diamond grinding:** removes contaminants and weak layers from the concrete, creating a profile for lasting adhesion
- **Polyaspartic base coat + color chips:** decorative chips added until the floor is fully covered for a dense, showroom-style finish that hides slab imperfections
- **Clear non-slip topcoat:** finished with a clear protective topcoat with a non-slip additive that provides additional traction underfoot.

RESULTS

Turns each cottage garage from bare concrete into a space that looks and performs like a finished room.

The full-broadcast chip and clear-coat finish look beautiful and are built to last.

The non-slip topcoat adds traction even when the floor is wet.

The sealed surface resists stains and dust, so upkeep is just sweeping and an occasional mopping.

The finished floor is perfect for parking a car or golf cart or working on hobbies and crafts.
